

Fact Sheet

Overview:

East End Resource Recovery is a state-of-the-art landfill site that accepts construction and demolition (C&D) debris within a 150-mile radius of Richmond, Virginia. The site is one of a few of its kind in the U.S. to “mine” waste and recover salvageable, recyclable materials for use and resale.

Through this innovative sustainability process, involving sophisticated machinery that separates materials and reduces waste to a smaller, denser mass, East End Resource Recovery reduces the amount of waste material going into the landfill site and also reduces mass, thereby increasing precious space and conserving more open land. Recovered materials are sold for recycling or repurposed.

Our Commitment

East End Resource Recovery responsibly handles non-hazardous construction and demolition debris and looks for ways to reduce the amount of solid waste disposed. By implementing sustainable resource recovery methods, we continue to recycle and recover valuable materials for reuse. We strive to be fully compliant with regulatory guidelines and responsive to our neighbors.

Site Location:

1820 Darbytown Road
Richmond, Va. 23231
Phone: 804-226-6955
Fax: 804-226-8629

Recycling/Reuse:

In 2009, of the 405,900 tons of material received at East End Resource Recovery, 170,646 tons were recycled, achieving a recycling rate of 42%.

These results will help Central Virginia Waste Management Authority and Henrico County meet their state-mandated recycling rate of 25% every year. These materials would otherwise have been disposed of, using up valuable landfill space.

- **Tires** are littering thousands of acres across Virginia. The company sends equipment to illegal and otherwise abandoned tire dumpsites and recycles those tires. The repurposed material is carted away and used as a substitute for other natural resources in civil construction projects by East End Resource Recovery and other end users. In 2009, more than 1,185 tons of tires were recovered. In 2010, the company expects to recycle a half-million tires, which is the equivalent to 5000 tons or 10 million pounds of passenger tires.
- **Biomass** materials are created from recovered brush and wood products (excludes pressure treated or creosote treated), which are ground to a small size and sold as fuel. More than 3,759 tons were recovered and sold in 2009.
- **Metals**, a valuable commodity, are harvested from the incoming waste stream. All of the ferrous and non-ferrous metals are separated and processed at our state-of-the-art metals recycling facility and sold to end users to be made into new consumables. This service is also available to other area manufacturers that wish to implement sustainable practices and utilize this service offered by East End Resource Recovery.

Other products recovered and recycled:

- Steel and scrap metals – 1,824 tons
- Glass – 7,531 tons
- Asphalt – 630 tons
- Concrete – 40,648 tons
- Dirt/Soils– 113,738 tons
- Ash – 1,331 tons
